

## ServiceNow Transform Row Script

```
(function transformRow(source, target, map, log, isUpdate) {  
  
    // Get Employee ID from source data  
    var employeeId = source.u_employee_id;  
  
    // Check whether Employee ID is available  
    if (!employeeId) {  
        ignore = true;  
        log.info("Employee ID is missing. Record skipped.");  
        return;  
    }  
  
    // Example: set target fields  
    target.u_employee_id = employeeId;  
    target.u_name = source.u_employee_name;  
    target.u_email = source.u_email;  
    target.u_department = source.u_department;  
  
})(source, target, map, log, action === "update");
```
